

One Solution to Manage Worldwide Compliance and Sustainability Reporting

Syngenta selected the Enviance System as the most cost effective and functional solution, with the potential for an infinite number of additional programs to be managed.

As one of the world's leading agribusinesses, Syngenta is committed to responsibly managing all aspects of environmental compliance and sustainability. This is why the company evaluated several compliance management systems, looking for the one that would afford the most functionality while still providing a user-friendly interface.

Syngenta was already collecting data in a simple management system, but the organization wanted more sophisticated functionality and the ability to manipulate their data for multiple reporting requirements. The Enviance System allows Syngenta to enter data only once, and use it for a wide variety of reporting, including:

- Greenhouse Gas (GHG) emissions data for facilities in 37 different countries
- Sustainability data for shareholder and public reports
- Auditable and verifiable data for the Dow Jones Sustainability Index (DJSI)
- Corporate responsibility reports

After the evaluation period, Syngenta selected the Enviance System as the most cost effective and functional solution, with the potential for an infinite number of additional programs to be managed. Using Enviance's web services, the user interface was designed to preserve the data entry processes already in place. This allowed for a seamless transition and implementation for hundreds of users, and was relatively easy to do when compared to customizing a client server application.

With a basic data entry system in place for hundreds of users, Syngenta wanted to ensure that their new compliance system would mirror processes already in place while giving the management team more control over the data. Utilizing the

Enviance System's flexibility, a custom interface was designed for data entry users and the System's workflow was tailored to fit the organization's precise requirements.

Since the System is available on demand, the need for on-site application installations or upgrades is eliminated – precluding any burden on IT resources and meeting Syngenta's ease-of-maintenance criteria.

The Enviance solution also satisfied Syngenta's cost management needs, requiring only a monthly licensing fee, with no additional hardware, support, or upgrade costs required.

“Syngenta selected Enviance because it offers a full-service package without taxing our IT department. And, the flexibility of the System allows for easy data entry, comprehensive reporting, and scalability.”

Global HSEQ Systems Manager, SYNGENTA

By using the Enviance System to manage corporate responsibility and sustainability data, Syngenta is going beyond compliance and addressing climate change head on with accurate, consistent, and verifiable data.

Using one system allows the company to internally audit and analyze data to improve future performance for: *Air, (including GHG); Water; Waste; Natural Resources; Hazardous Waste; Fuel Usage; Sustainability*

Because the organization chose a flexible compliance management system, users at every level are seeing the benefits. Facility workers have a user-friendly interface for data entry. Regional managers are able to run reports to verify data accuracy, and they can see compliance status in real-time with just a few clicks. This ensures that the most complete and accurate data will be available for the global manager when running Syngenta's reports for shareholders and annual public reporting.

ABOUT ENVIANCE: Enviance is the leading provider of Environmental ERP software. With more than a decade of experience providing environmental data management and expertise, Enviance's proven system is used by the world's largest corporations and government agencies including American Electric Power, Arch Coal, Chevron, CH2M Hill, Dimension Data, DuPont, Freescale Semiconductor, Fujifilm, Georgia-Pacific, Los Angeles World Airports, Pfizer, Syngenta, and the U.S. Army.
